Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

7 E
Claims 1-~~8~~ are rejected under 35 U.S.C. 103(a) as being unpatentable over Croteau-Brooks (US Patent No. 6,604,982) in view of Tilbor et al. (US Patent No. 6,024,627).

Croteau-Brooks discloses pair of left and right driven wheels (28); a pair of left and right steered wheels (28), and a steered wheel-supporting mechanism (18) which supports the steered wheels (28) such that each steered wheel can turn around a predetermined steering axis and such that the steered wheels can turn in the same direction in association with each other; the steering axis is inclined (such as at point shown in Figures 6-8) with respect to a vertical direction such that an upper portion of the steering axis is located rearward of a lower portion of the steering axis in a traveling direction.

7 E
Croteau - Brooks
~~Wang~~ does not disclose the pair of left and right driven wheels being independently driven by different driving sources; the inclination angle of the steering axis with respect to the vertical direction being in the range of 20 to 40 degrees.

Art Unit: 3711

Tilbor teaches a toy vehicle having a pair of left and right driven wheels being independently driven by different driving sources (col. 3, lines 66-67 through col. 4, lines 1-2)..

It would have been obvious to one having ordinary skill in the art at the time the invention was made to provide the pair of left and right driven wheels being independently driven by different driving sources as taught by Tilbor et al., since such a modification would provide enhanced steering and propulsion.

With regard to the inclination angle of the steering axis with respect to the vertical direction being in the range of 20 to 40 degrees, it would have been obvious to one having ordinary skill in the art at the time the invention was made to provide the vertical location of the claimed range, since it has been held that where the general conditions of a claim are disclosed in the prior art, discovering the optimum or workable ranges involves only routine skill in the art. In re Aller, 105 USPQ 233.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Urszula M. Cegielnik whose telephone number is 571-272-4420. The examiner can normally be reached on Monday through Friday, from 5:45AM-2:15PM.
